# AVERY

# SIGNS OF SAFETY

**Refresh and create effective safety signage and get people paying attention to ensure your workplace is safe and compliant**

# SAFETY FIRST

In an industrial work environment, safety signs are a high priority. These signs are the frontline in preventing injury and educating both guests and employees as to the hazards of their surroundings. If a crisis situation arises, signs give your staff immediate direction to act quickly. If you neglect necessary signage and an accident occurs, you may face legal action.

Keeping staff alerted to dangers can help ward off industrial accidents, so compliance to Standard AS: 1319 is imperative. This sets out the requirements and use of safety signs which regulate and control how people act as well as notify them of perils and provide information to lessen risk.

Generally speaking, your signage needs to be legible from a distance without needing to squint. Factor in the space, lighting and viewing distance when determining the size of your signage.

## DID YOU KNOW?

**It is extremely important to engage your employees beforehand when placing or removing a sign. This ensures all staff are across any changes to their environment of any potential hazards or risks.**

# INDUSTRIAL READY

Avery DIY Industrial Grade Labels are engineered and fit for purpose and designed to tackle tough environments. These tough labels offer a solution where a standard paper label won't cut it. Long-lasting and dependable, these products come in a comprehensive range, giving you the option for every shape and size. While paper and industrial labels appear alike, Avery engage rigorous research and development to ensure each product aces it's application.

## SAFETY FIRST

**Make staff and visitors aware of any dangers or hazards in the workplace and create Safety Signs compliant to the standard AS 1319 using Avery Design & Print Online software and templates**

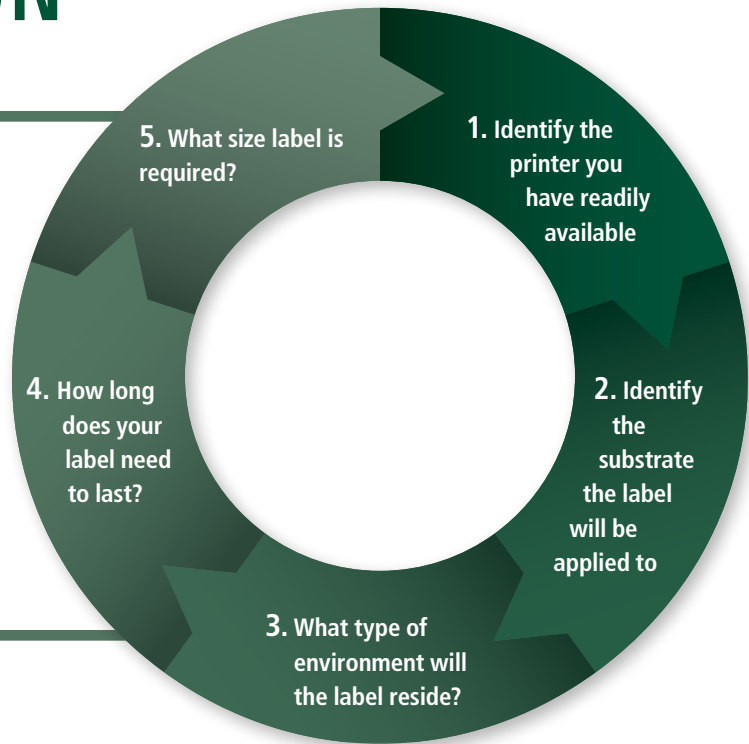

**DANGER**

**CHEMICAL STORAGE AREA**

## DID YOU KNOW?

**Clear visibility of all signs enhances workplace safety for all employees and visitors to your workplace. Sign locations must always be kept clear of any stacked materials which might cover the sign warning of hazards.**

# LABEL LOW-DOWN

## HOW TO SELECT THE RIGHT LABEL FOR YOUR ENVIRONMENT AND APPLICATION

5. What size label is required?

1. Identify the printer you have readily available

2. Identify the substrate the label will be applied to

3. What type of environment will the label reside?

4. How long does your label need to last?
